

# Technology Roadmap

	<b>Short Term, by 2009</b>	<b>Mid Term, by 2012</b>	<b>Long term, by 2015</b>
<b>Objectives / Needs</b>	<p>1) Model gas-liquid flow regimes effectively and accurately e.g. bubble column from “bubbly” to “churn turbulent” regime. Problems caused by inherent instabilities in flow.</p> <p>2) Validate CFD codes against existing database of numerics, experiments and theory / DNS. J. Morris, A. Sangani, L.S. Fan, R. Fox.</p> <p>3) Exp design 3D tomography, MRI, X-ray exps to provide data to validate models. L.S. Fan, M. Dudukovic, T. Heindel.</p>	<p>1) Need to model reacting multiphase flows with heat and mass transfer, e.g, methanol synthesis.</p> <p>2) Design and perform simple heat and mass transfer experiments.</p> <p>3) Define accurate boundary conditions</p> <p>4) Design 3D tomography, MRI, X-ray experiments to provide data to validate models. L.S. Fan, M Dudukovic, T. Heindel.</p>	<p>1) The ability to use code for industrial scale-up.</p> <p>2) Design 3D tomography, MRI, X-ray experiments to provide data to validate models. L.S. Fan, M. Dudukovic, T. Heindel.</p>
<b>Technical Challenges</b>	<p>1) Capture regimes correctly.</p> <p>2) Understand constitutive relations</p> <p>3) To model steady-state axi-symmetric, statistical steady state simulation.</p>	<p>1) Capture regimes correctly.</p> <p>2) Understand constitutive relations.</p> <p>3) Formulate Meso-scale models to bridge gap between micro and macro-scales.</p>	<p>1) Capture regimes correctly.</p> <p>2) Understand constitutive relations</p>
<b>Approaches</b>	<p>1) Collaboration is key between academia and industry.</p> <p>2) Experimentalists should work with code developers. Design code by 2015 that can tackle wide range of problems.</p>	<p>Industry would like to see a few typical problems validated for confidence in CFD results – benchmark problems.</p>	
<b>Notes</b>			

# Technology Roadmap

	Short Term, by 2009	Mid Term, by 2012	Long term, by 2015
<b>Objectives / Needs</b>			
<b>Technical Challenges</b>			
<b>Approaches</b>			
<b>Notes</b>	<p>1) Scales need to be bridged between single bubble case (which can be accurately computed using free-surface flow) and swarms of bubbles.</p> <p>2) Experiments are not always up to par to address some of these issues.</p> <p>3) Measurement of in situ fluid properties at different scales is challenging.</p> <p>4) This is an opportunity to leverage 20+ years of expertise to solve multiphase flow problems in the fossil fuel energy sector.</p> <p>5) NSF can provide funding for internships/research through IGERT. Success rates for GOALI project higher.</p>		

# Technology Roadmap

	<b>Short Term, by 2009</b>	<b>Mid Term, by 2012</b>	<b>Long term, by 2015</b>
<b>Objectives / Needs</b>	<b>Industrial G-L examples:</b> Bubble Columns / Fischer-Tropsch / CO <sub>2</sub> sequestration, adsorption and desorption.		
<b>Technical Challenges</b>	<p>1) Can solve bubbly regime but challenging to solve churn-turbulent flows.</p> <p>2) Model bubble size distribution accurately.</p> <p>3) Assumptions do not model the actual problem realistically. 4) Need to span across regimes.</p>	<p>1) Need to develop measurement techniques for high pressure and temperature bubble columns.</p> <p>2) Need for reliable turbulence models without losing key flow features.</p> <p>3) Need to span across regimes.</p>	Need to study concentration effects on flow. Sub-grid inhomogeneities.
<b>Approaches</b>	Tomography, MRI, X-ray techniques provide data to validate models.		
<b>Notes</b>	There is a wealth of literature on bubble column available. We should try to avoid repeated work.		

# Technology Roadmap

	<b>Short Term, by 2009</b>	<b>Mid Term, by 2012</b>	<b>Long term, by 2015</b>
<b>Objectives / Needs</b>	<b>Industrial L-S flow examples:</b> Hydrocyclones; Crystallization; Pipeline transport.		
<b>Technical Challenges</b>	1) Lubrication; Particle-particle interaction; 2) Particle size distribution and density variation; 3) Highly swirling, turbulent flow separation. 4) Experimental challenge: measurement of phasic velocities and stresses. 5) Boundary Conditions are not well understood.		
<b>Approaches</b>	1) Melany Hunt: Single particle experiments provide insight into modeling multi-particle systems. 2) Focus on coal required to solicit funding from NETL?
